## GENERAL DESCRIPTION

List: EDAR1211-1-Oct 2015

This digital amplifier EDAR 1211-1-25 is designed to control direct operated proportional directional control valves and proportional flow regulators with one solenoid without feedback.
There are few adjustments for base parameters:
-Imax. to control the maximum current to the solenoid -Imin. to correct the positive overlap (dead band elimination) -Ramps to set increasing/decreasing time on channel "a"
-PWM to regulate hysteresis and stability (accuracy) of the valve high frequency - high accuracy , high hysteresys low frequency - low accuracy, low hysteresys. The adjustment sets realized by 4 push buttons on the front cover. The amplifier is designed for rail mounting type DIN EN 50022.
